FEATURES

- ▶ **Smallest Encapsulated 12W Converter**
- ▶ **Industrial Standard DIP-16 Package**
- ▶ **Ultra-wide 4:1 Input Voltage Range**
- ▶ **Fully Regulated Output Voltage**
- ▶ **I/O Isolation 1500 VDC**
- ▶ **Operating Ambient Temp. Range -40℃ to +85℃**
- ▶ **Low No Load Power Consumption**
- ▶ **No Min. Load Requirement**
- ▶ **Under-voltage, Overload and Short Circuit Protection**
- ▶ **Shielded Metal Case with Insulated Baseplate**
- ▶ **Conducted EMI EN 55032 Class A**
- ▶ **UL/cUL/IEC/EN 62368-1 Safety Approval & CE Marking**

UL 62368-1 CB Scheme

PRODUCT OVERVIEW

The MDWI12 series gives designers the flexibility to match the choice of converter to specific application requirements. The high power density of MDWI12 series, at 59W/in^3, is expected to make it popular with manufacturers of industrial, medical, transportation and power generation equipment where space-constrained designs.

This product offers a full 12Watt isolated DC-DC converter within a small encapsulated DIP-16 package which occupied only 0.5in^2 of PCB space. There are 14 models available for 24 & 48VDC with ultra-wide 4:1 input voltage range. Further features included under-voltage protection, overload protection, short circuit protection, very low no load power consumption, no min. load requirement and conducted EMI class A approved as well. High efficiency allows operating temperatures range of -40℃ to 85℃. All models have been qualified per the CB scheme with safety approvals to UL/cUL/IEC/EN 62368-1.

Notes

1 Specifications typical at Ta=+25℃, resistive load, nominal input voltage and rated output current unless otherwise noted.
2 Transient recovery time is measured to within 1% error band for a step change in output load of 75% to 100%.
3 We recommend to protect the converter by a slow blow fuse in the input supply line.
4 Other input and output voltage may be available, please contact MINMAX.
5 To meet EN 55032 Class A with an external filter, please contact MINMAX.
6 To meet EN61000-4-4 & EN61000-4-5 an external filter requested, please contact MINMAX.

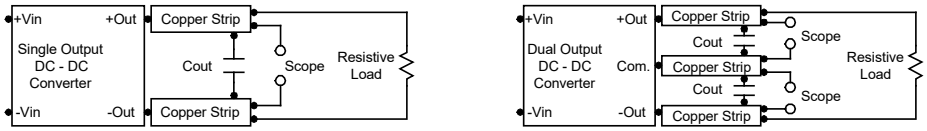
Test Setup

Peak-to-Peak Output Noise Measurement Test

Refer to the output specifications or add 4.7μF capacitor if the output specifications undefine Cout. Scope measurement should be made by using a BNC socket, measurement bandwidth is 0-20 MHz. Position the load between 50 mm and 75 mm from the DC-DC Converter.



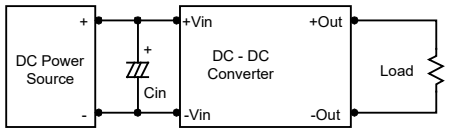
Technical Notes

Overload Protection

To provide hiccup mode protection in a fault (output overload) condition, the unit is equipped with internal current limiting circuitry and can endure overload for an unlimited duration.

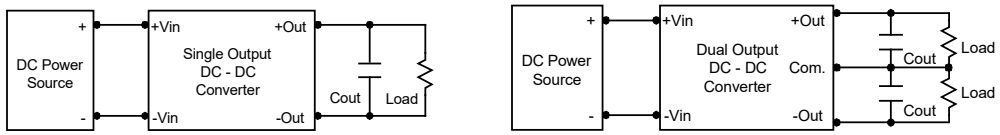
Input Source Impedance

The power module should be connected to a low ac-impedance input source. Highly inductive source impedances can affect the stability of the power module. In applications where power is supplied over long lines and output loading is high, it may be necessary to use a capacitor on the input to insure startup. By using a good quality low Equivalent Series Resistance (ESR < 1.0Ω at 100 kHz) capacitor of a 2.2μF for the 24V and 48V input devices, capacitor mounted close to the power module helps ensure stability of the unit.



Output Ripple Reduction

A good quality low ESR capacitor placed as close as practicable across the load will give the best ripple and noise performance. To reduce output ripple, it is recommended to use 2.2μF capacitors at the output.



Maximum Capacitive Load

The MDWI12 series has limitation of maximum connected capacitance on the output. The power module may operate in current limiting mode during start-up, affecting the ramp-up and the startup time. Connect capacitors at the point of load for best performance. The maximum capacitance can be found in the data sheet.

Thermal Considerations

Many conditions affect the thermal performance of the power module, such as orientation, airflow over the module and board spacing. To avoid exceeding the maximum temperature rating of the components inside the power module, the case temperature must be kept below 105℃. The derating curves are determined from measurements obtained in a test setup.
